

Completion of KC Ground Floor

KC Project Refresh; an exciting opportunity for An Eye for Design to work for one of the largest and influential organisations in our area. Kingston Communications with a history that stretches back over a hundred years to 1904, the first in the UK to offer untimed internet access, as well as the first to provide a UK broadband service, are a client to hold on to. Turton Associates of Sancton kindly introduced us to the project and we have enjoyed a great working partnership.

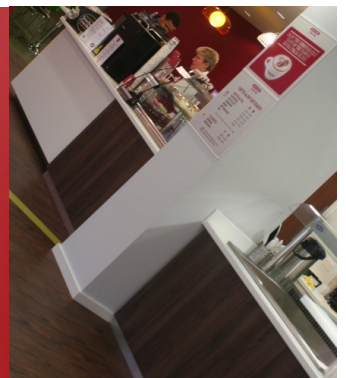

The project is currently at fit out stage with the Ground floor area completed and handed over on January 2nd 2012.

The Ground Floor area incorporates the front of house areas including Cafe, Reception, Meeting rooms, Business area and Customer area. The diverse requirements of the ground floor space required careful space planning and considerations. Colour, shape and form, flooring styles and furniture were used to define the spaces and be clear on its use.

Reception Area

The furniture chosen for the reception area is the striking high backed Cwitch by Orangebox, mixed with fun stools creates a light and informal atmosphere.

Cafe Area

The diverse requirements of the cafe which included business to business meets, quick stops for a coffee, lunch hours or simply to download work from clouds meant we were looking at a variety of furniture and fittings.
