What is a construction drawing?

Construction drawings are the final and complete set of drawings ready for construction. They would show the details and specifications of all elements required for the site, including site plans, detail elevations, Duct paths, mechanical and ventilation layouts, interior finishes to name a few. These drawings are used to communicate the design intent clearly and concisely to the contractor and for them to construct from.

These drawings should be fully co ordinate with all trades, be accurate and concise, fully legible and to an appropriate scale. The drawings should have minimal duplications of information and consistent from sheet top sheet.
